

Here are the changes for this next version.

----- September 2010 -----

Refactored boarding sign-in to significant speed enhancements

Updated Purchase Statistics - includes last purchase date

Additional security updates / checks throughout system

Replaced xajax back-end to latest version to fix possible XSS vulnerability.
Combined Javascript and CSS files and modified templates to reduce number of threads needed to load a page.

Preference Changes

Automatically use sign-in time for checkout time (Boarding)
Automatically uses the boarding sign-in time as the boarding estimated sign-out time when selected. This option can be used with Enable Daycare After Boarding to work off a 24-hour clock.

Daycare to Boarding Addition

When selected, will add a separate boarding charge in addition to the existing daycare charge, otherwise, it will replace the daycare with the boarding charge.

Disable Boarding Date Check

When selected, this option will allow multiple boardings to be scheduled regardless of overlapping dates. This option does not affect the owner side, but can lead to inadvertent multiple boardings.

Disable Owner Details for Groomers

When selected, will not display a link to the owner information for grooming.

Show Credit Card Number

Enables credit card fields to be shown. When disabled, credit card numbers are NOT shown, but the system, if available, will show the last four of the credit card number for reference. In the interests of security, we highly recommend you leave this option unchecked.

Email Owner Boarding Confirmation

When selected, will automatically email the associated email address whenever an owner schedules a boarding.

Display Debit Flag on Dashboard

When selected, an indicator will show if a customer owes money (has a debit) in the Dashboard Daycare, Boarding and Grooming sections. Mousing over the indicator will display what they owe (not counting anything they still have in their cart) and clicking on the indicator will bring you to the appropriate debit detail page for the selected owner.

Added preference to show pet vaccination info on the Boarding Coming and Going at the expense of added real estate.

Added preference to limit the number of scheduled daycares for owners (admins are only shown a warning).

Add preference to control checkbox for daycare sign-in to place note on Daily Notes or associated with each dog being signed in.

Add preference for controlling automatically going to cart when signing dog(s) into daycare.

Add preference for controlling automatically going to cart when signing dog(s) into boarding.

Changes to aid in scanner usage for owner / pet / products and services

Color-coded Daily Notes

Daily To-do bug fix relate to showing modified food/med info on first day of boarding.

Added ability to delete a pet from a boarding.

Added ability to bulk delete a pet from scheduled daycare.

Added status to daycare dogs if they are using a package and added link to jump directly to package. Modified the daycare sign-in directions to be more explicit about how to sign in a dog without using an existing package.

Added "Deleted Order" report - Shows last 10 deleted orders, including who deleted them and when.

Modified search forms to automatically insert cursor to search field when page loads to save mouse clicks where appropriate.

Made Boarding dropoff/pickup times 24 hrs.

Reorganized preferences by sections

Added pet "Advisory" checkboxes to add and modify pets for biting, aggressive, food aggressive, jumper and coprophagia (poop eater). If any of these are checked, an advisory icon shows up on the dashboard. Mousing over the icon will display the selected afflictions.

Added Australian states/territories to state drop-downs.

Added email field to vets section.

Changed Service Statistics to clarify boarding-related changes.

Added "Tradeout" type to payment / refund.

Changed boarding end date to current signout date upon signout.

Changed Boarding to specifically pick which food from a drop-down instead of choosing use ours or theirs. This will require existing boardings to be checked and modified, but there isn't a way to automate it. Anything marked as "Food" as the product type will show up in the list.
